

Ready to apply for the MLH Fellowship? (Page 1 /10)

Hey, there! We're so excited to hear that you're interested in becoming an MLH Fellow in our upcoming batch.

At Major League Hacking (MLH) we know the power of hands-on learning first-hand. Every year, more than 135,000 aspiring technologists around the world participate in MLH events where they learn the skills that help them land jobs, launch startups, and everything in between. You can't learn these necessary skills in most classrooms, which is why so many people take their education into their own hands and join our community every year.

The MLH Fellowship is a collection of programs designed to make learning these skills easy, fun, and fast. By pairing educational and fun content with practice experience, you can learn a lot in a very short period of time. Whether you're looking to build out your initial portfolio of personal projects, polish up a project you're passionate about, or start contributing to Open Source, we have a program for you.

Upcoming Terms and Deadlines

Spring 2026 Software Engineering: Starts January 26th, 2025

- Deadline for Applicants from all regions: January 2nd, 2026

The application takes approximately 30-45 minutes to complete. You can save your work at any time and come back to it in the future.

Eligibility Check (Page 2 /10)

Before we get too far along, let's confirm your eligibility for the program. In order to apply for this program you must meet **all** of the criteria listed below.

Instructions

Congratulations! You are qualified to apply for the MLH Fellowship. Click "Next Page" below to continue your application.

Program Qualification Confirmation

- **Age: I am over the age of 18.**
- **Residency: I do not reside in a country embargoed by the United States.**
- **Time Commitment: I am able to commit at least 20 hours per week to the program.**
- **Communication: I am proficient with English, both written and spoken.**
- **Coding Experience: I can code proficiently in at least one programming language.**
- **Environment: I have regular access to quiet workspace for meetings & coding.**
- **A/V Setup: I have regular access to a video call quality Internet connection, webcam, & microphone.**
- **Event Attendance: I have participated in at least one MLH Hackathon or Global Hack Week event.**

Create your Profile (Page 3 /10)

Let's start by collecting some basic information about you and where we can find you on the internet.

Basic Information

First Name Last Name

Ngozi Odiase

Primary Email Address

daniellaodiase912@gmail.com

Portfolio/Resume

We ask you to share a copy of your resume and links to your online profiles to help us better understand your experience level and background. The more information you can share with us, the better!

*You must share **at least one** of the listed items with us to submit an application. Uncheck the box next to anything that you don't currently have.*

Which of the following do you have that you can share with us?

- **Resume**
- **GitHub Profile**
- **Personal Website / Portfolio**

Resume

Ngozi_Daniella_Odiase(resume).docx

GitHub

GitHub Handle

[http://github.com/ danny-912](http://github.com/danny-912)

Personal Website URL

<https://danny-912.github.io/my-portfolio/>

Programs (Page 4 /10)

The MLH Fellowship is a collection of 12-week programs designed to help you level up your tech skills quickly. Whether you're looking to build out your initial portfolio of personal projects, start contributing to Open Source, or gain practical experience solving real problems for companies, we have a program for you.

In this section you'll learn about some of the key ideas behind the fellowship and tell us which programs you're interested in.

Citizenship / Visa Status

Some opportunities require you to hold citizenship or a visa in your country of residence or the country where the employment partner sponsoring your participation is located.

Country

Nigeria

In which country will you primarily reside in during the program, if accepted?

Nigeria

Do you have work authorization in any additional countries?

No

Program Selection

Which program would you like to be considered for? Term

Software Engineering**Spring 2026 (January 26th - April 17th, 2026)**

Scheduling Preferences

Time Commitment

- I am able to commit at least 20 hours per week to the program.

During which time blocks are you available to meet with staff or other Fellows, should you be admitted?

- 18:00 GMT

Education Experience (Page 5 /10)

Overview

Are you currently enrolled as a student in an academic institution?

Yes

Current Academic Experience

Current Institution Name

Current Institution Type

Brigham Young University - Idaho University - Undergraduate (3-5 year degree)

Expected Graduation Month Expected Graduation Year

July

2027

Major

Computer Science / Software Engineering

Type of Credential Granted

Degree

Professional/Work Experience (Page 6 /10)

Overview

Are you planning to look for a coding job in the next 12 months?

Yes, I will be looking within 12 months

Job Search

You indicated you'll be looking for a coding job within the next 12 months. Tell us about your plans.

When would you be looking to start that job/internship?

Fall (September - December)

Are you open to remote work opportunities?

Yes, I'm open to remote opportunities

Developer Experience (Page 7 /10)

Experience

Please rate your level of familiarity with the following programming languages:

Android (Java/Kotlin)

Very unfamiliar, have never used

C

Very unfamiliar, have never used

C++

Very unfamiliar, have never used

Rust

Very unfamiliar, have never used

Go

Very unfamiliar, have never used

iOS (Swift/Objective-C)

Very unfamiliar, have never used

Java (Non-Android)

Very unfamiliar, have never used

JavaScript

Somewhat proficient, use occasionally

TypeScript

Very unfamiliar, have never used

Julia

Very unfamiliar, have never used

PHP

Very unfamiliar, have never used

Code Sample Requirements:

- **Representative:** The sample should be representative of your abilities. If you're submitting a group project, make sure you contributed a substantial amount of code. Projects that are based mostly on a tutorial aren't representative of your own abilities.
- **Existing sample:** This is code that you wrote for a purpose other than this application.
- **Public on GitHub:** Your sample should be viewable on GitHub publicly. If you can't make the repository public, convert your code to a secret GitHub Gist instead.
- **Multiple files:** Your sample should consist of multiple files and be of substance. It's hard to have a conversation about a single function.
- **Not too large:** It's difficult to have a conversation about a mono-repo with dozens of microservices. It should be immediately clear what you contributed to the sample. Dense frameworks with lots of boilerplate such as Django or Laravel don't usually make for good code samples. Lightweight frameworks such as Flask and Express are good examples.
- **Real problem:** Your sample should solve a real problem or accomplish a real goal. While some class projects will meet this criteria, most won't. There's nothing wrong with the binary search tree you wrote, but it'll be hard for your interviewers to get to know you through that kind of sample.
- **No Jupyter notebooks:** We need to see your ability to write a project that an end user can use. It should be deployable. We don't accept Jupyter notebooks or other exploratory code samples because it's difficult to have a conversation about your coding skills with these.
- **Aligned with our available tracks:** The Fellowship currently supports projects primarily in the following coding languages: **JavaScript, TypeScript, Python** (especially the SRE track), and **Rust** (especially the Web3 track). You will give yourself the best chance of admission if you submit a project in one of those languages. You may still submit in any language you like, but you may be asked to provide a supplemental code sample later in the admissions process in order for us to assess your proficiency.

Examples of good code samples

- A web app with JavaScript
- A web server (backend only)
- A desktop app
- A command line app

Examples of poor code samples

- Jupyter notebooks
- Tutorials

- ### What to do if you don't have an appropriate code sample:

Code Sample

Code Sample GitHub URL	Which programming language/technology are your contributions to this code sample primarily written in?	Appropriate Code Sample Confirmation	Briefly describe what this code sample does:	Briefly describe what you learned when you created this code sample:
https://danny-912.github.io/weather-outfit/	JavaScript (SWE)	- I understand that the MLH Fellowship tracks primarily require proficiency in JavaScript, TypeScript, Python, or Rust, and that if I have submitted a code sample in another language, I may be asked to provide a supplemental code sample. The MLH admissions team may also explore my publicly-available GitHub repos	The app fetches real-time weather data for a user-specified location using a weather API (like OpenWeather). It then analyzes the temperature, wind, and weather conditions to provide practical clothing suggestions for the user. Essentially, it turns raw weather data into actionable advice for daily use.	I learnt how to connect external data to retrieve real-time data. I developed the ability to translate raw weather data into actionable advice, like clothing recommendations. I learned the importance of turning complex data into simple outputs that end-users can easily understand and most importantly I learned how to take an idea from concept to a working program that a user can interact with.

Essay Questions

Essays are an important part of how we evaluate applicants for the MLH Fellowship. Make sure you include enough information to help us understand who you are, why you want to be an MLH Fellow, and what you would bring to the program.

Your essays are your first impression to our admissions team. The best essays show us how passionate you are about this opportunity and give us lots of detail about you and your interests. Take your time here and show the best possible version of yourself! There is no word count minimum, but we recommend at least a paragraph or two for each essay.

We recognize that many applicants will want to use AI-enhancing tools to polish their essays (ChatGPT, Bard, etc.) While we recognize the value that these tools can provide in enhancing or streamlining your writing, we have found that applicants who rely too heavily on these tools are unlikely to be ready for the high-level communications required to participate in the program. Our recommendation is to write your own personalized essays from scratch and only use AI tools for enhancements or corrections. Submitting a fully AI-crafted essay may result in your disqualification.

Why do you want to become an MLH Fellow?

I want to be an MLH Fellow because I want to grow as a software developer, gain real world experience and collaborate with mentors and other fellows. I also want to be a part of a community filled with passionate developers like myself to better enhance my abilities.

The MLH Fellowship is a diverse community that welcomes Fellows from a wide range of experiences and backgrounds. What perspective or experience will you bring to the fellowship to strengthen our community?

I will bring in my experience that I gained while working on projects independently which has taught me problem-solving and persistence . I will also bring in my enthusiasm to learn from others and help them grow by sharing knowledge to help other fellows succeed. I hope to strengthen the fellowship by combining my technical and soft skills with a zeal of learning from and supporting a community of developers.

Anything else we should know about you?

One thing I'd like for you to know about me is that I'm passionate about creating software that solves real-world problem as shown in my Weather Clothing App and I'm very eager to take on projects that stimulates my growth as a developer.

Optional Questions (Page 10 /10)

Demographics

We invite applicants to self-identify as to their pronouns, gender, race/ethnicity, and veteran status. Completion of this form is entirely voluntary and declining to provide this information will not subject you to adverse treatment. Any information that you do provide will be maintained confidentially and will not be shared.

All individuals seeking to join the MLH Fellowship are considered without regard to race, color, religion, national origin, age, sex, marital status, ancestry, physical or mental disability, veteran status, gender identity, sexual orientation, or any other legally protected characteristic. You are being given the opportunity to provide the following information in order to help us measure our own diversity and inclusion efforts and to comply with applicable federal and state Equal Employment Opportunity record-keeping and reporting obligations.

What are your pronouns?

She/Her

Gender Race/Ethnicity

Female Black or African

Do you identify as part of an underrepresented group in the technology industry?

Prefer Not to Answer

Misc.

How did you hear about the MLH Fellowship?

I found it myself on Google or another search engine
